1. Preparing for installation

Read these assembly instructions carefully and keep them within reach when using the sauna so that you can look up product information at any time.

These assembly instructions can also be found in the customer service section of our website: almostheaven.com.

Important note:

- Before you begin work, check the parts list to ensure that all the individual parts have been delivered. If you discover any missing parts, notify your dealer within 14 days of receiving the sauna cabin.
- The room that the sauna is installed in must be dry and ensure an appropriate amount of air circulation.
- The floor must be level and even, preferably a stone or tiled floor.
- A minimum room height of 230 cm is required for the cabin installation work.
- A distance of at least 5 cm from the wall must be maintained.
- The inside of the wooden parts used must not be handled with any impregnating material.
- You need an assistant for the installation.
- Wood is a natural product that can swell, shrink or warp, despite good storage. For this reason, some force may be necessary during the installation.
- All screw fittings must be pre-drilled.

EN

Attention!

The electrical connection may only be performed by a qualified electrician or similarly qualified person.

1.1. Tools required

- Hammer with a wooden head or a mallet
- Cordless screwdriver with bits for cross-head screws and Torx
- Roller tape measure
- Drill bits with a diameter of 3 mm, 10 mm, 20 - 30 mm (for sauna heater power cable)
- Spirit level
- 1.5 mm hexagonal socket wrench
- Utility knife
- Ladder

This symbol indicates tips and useful information

Pre-drill

Nailing

Check the right angle:

Handle glass with care: Special care must be taken with the edges of the glass – hardened glass can shatter into small pieces in the event of impact. Insert protective cushioning (e.g. cardboard box) under the edge of the glass.

1.2. Maintenance and cleaning

- The sauna should be cleaned with a damp cloth. Only use warm water – no cleaning products.
- We recommend heating the cabin once a month if the sauna is not used for a long time.

Pitch pockets are not grounds for return, since they can always appear in spruce wood and the depth at which they lie cannot be detected during the sorting-out process.

If these are just under the surface, heat can cause them to soften and “bleed”.

The leaking pitch can be removed with a rag soaked in acetone. If only droplets of pitch occur, allow these to harden and then carefully scrape them off with a knife.

1.3. Disposal

- Dispose of packaging materials in accordance with the applicable waste disposal regulations.
- Used devices contain reusable materials as well as hazardous substances. Therefore, do not dispose of your used device with household waste, but do so in accordance with the locally applicable regulations.

1.4. Parts list for Corner S1616CV and Corner Large S2020CV

2. Floor plan

2.1. NORDIC Corner S1616CV

2.2. NORDIC Corner Large S2020CV

3. Assembling the cabin

ATTENTION!

Note the floor plans on page 8 as well as the illustrations starting on page 12.

3.1. Assembling the base frame

Start with the base frame and screw it to the corners. Move the base frame to the final position of the sauna.

3.2. Assembling the cabin walls

Note the outside/inside of the wall elements.

Make sure the ventilation element is correctly positioned. It must be placed diagonally opposite the heater.

Start assembling the wall elements with the ventilation element and screw it to the corner post (G, H). The other wall elements are connected by tongue and groove and are fixed by mounting the roof frame. Check the right angles (see tip on page 4).

Mount the multiclips on the front side of the wall element and on the corner posts (C, D, E(EP), F). Make sure that the multiclips are correctly aligned – the corner posts are connected to the wall elements from top to bottom.

Fit the ventilation slider.

3.3. Assembling the roof elements

Insert the roof elements and screw them to the cabin walls. Note the cable outlet. It may be necessary to mount the rail for the glass front on the opposite side.

3.4. Assembling the benches

Mount the bench support slats on the side wall elements. Connect the angle bench to the sauna bench using M10 x 120 screws. Screw the adjustable feet into the bench foot. Fix the bench foot to the angled bench by tightening up the lock and screw the bench foot to the side wall.

Assemble the bench screen and the backrest.

3.5. Assembling the glass elements

Fit the aluminium U-profiles on the glass elements and install the glass elements in the cabin.

Note when installing the glass element that the holes drilled for the door hinges determine which way the door opens.

Note when installing the glass element that the holes drilled for the door hinges determine which way the door opens.

Bond the aluminium U-profiles to the floor with silicone or assembly adhesive.

Mount the spacer strip above the glass door.

When installing the door fittings, make sure that the door opens to the outside.

Screw the two door fittings to the glass element first, making sure that the fittings are aligned straight. Align the fittings by adjusting / turning the two plastic inserts.

The door handles are screwed together from the inside. Attach plastic washers on the stainless steel handle

Fit the door magnet and sleeve plate.

3.6. Installing roof trim

Mount the corner brackets to the roof trim strips. Then screw the roof trim strips to the roof element.

3.7. Mounting the cover slats

Fasten the inner roof corner trims, the inner corner trims and the outer corner covers using nails.

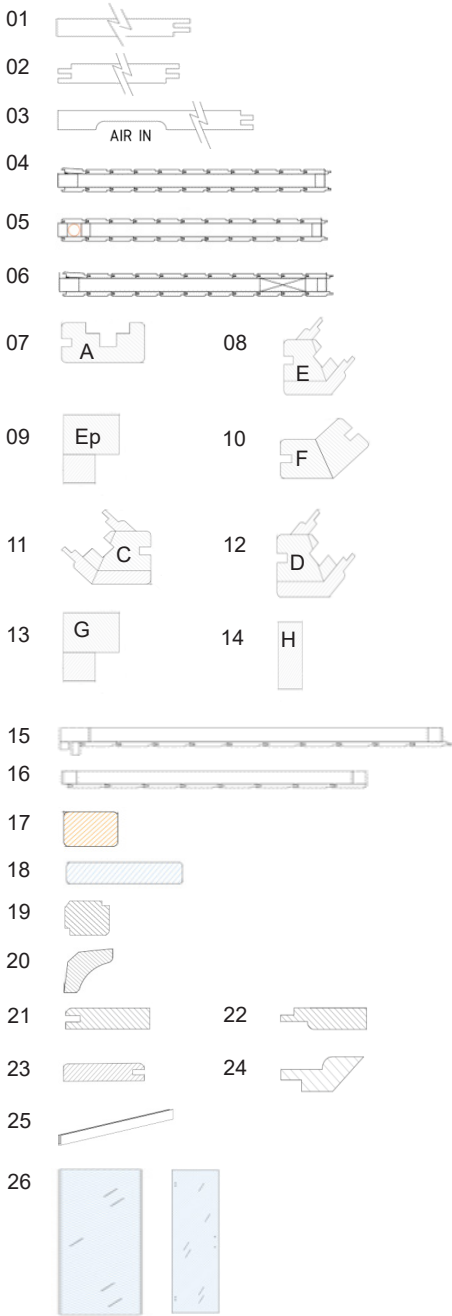

3.8. Drill hole for electrical cable

3.9. Mounting the light

3.10. Installation KIT for heater installation at the bench foot

Only required if the sauna heater is mounted on the bench foot in order to maintain the safety distances.
