

PLACING SAUNAMAESTRO ON THE SAUNA STOVE

Place SAUNAMAESTRO on the stovetop between the stones. Choose one of the hottest spots and make sure that the rim of the basin rises only slightly above the level of the stones. However, the basin must not come into direct contact with the resistors or the smoke vent of the stove, since this shortens the life of the product. The bubbling effect of SAUNAMAESTRO intensifies as the heat increases. Since each sauna is different, try to find the spot that best suits your stove and personal preferences. To ensure flawless functioning, the basin must be placed horizontally with fountain tubes pointing straight upwards. Tubes must never point towards the sauna benches!

**PROCEED WITH CAUTION WHEN FILLING THE BASIN FOR THE FIRST TIME!
DO NOT ALLOW CHILDREN TO USE SAUNAMAESTRO UNSUPERVISED!**

USING SAUNAMAESTRO

Pour warm water into the SAUNAMAESTRO basin. If the basin is hot, the first filling usually evaporates. Wait until all of the water has evaporated and refill the basin. The fountain should now start to bubble. The effect is most intense at the beginning but evens out with the following refills. SAUNAMAESTRO is ideally suited for the use of fragrant oils.

IF SAUNAMAESTRO DOES NOT FUNCTION PROPERLY

If placed correctly, the beautiful SAUNAMAESTRO fountain will enhance your sauna experience for many years to come. Always make sure that the basin is placed in a horizontal position before heating the stove. If the basin is slanted, the water from the fountain will splash onto the stones, shortening the duration of the bubbling effect. For a stronger effect, try placing SAUNAMAESTRO in a hotter spot and/or deeper among the stones.

Frequent and heavy use of fragrant oils (especially birch tar and similar) may lead to the obstruction of the inlet tubes. If this happens, please use SAUNAMAESTRO a few times with clear water only. The hot water will slowly clean the tubes. After repeating the procedure several times, the obstruction will be cleared and the fountain should work normally again. If the metal tube loosens,

place it back inside its mounting hole and gently tap it a few times. Make sure the tube is sitting firmly in place.

**NEVER TRY TO CHANGE THE POSITION OF SAUNAMAESTRO
WHILE THE STOVE IS HOT!**
